

kinactivTM fruit

science driven by nature

DECLARATION

- Free L-amino acids 4% by mass (selection of 4 aminoacids related with fruit quality enhancement)
- Organic nitrogen 0.50% by mass
- Phosphorus (P_2O_5) 12% by mass
- Potassium (K_2O) 16% by mass
- Boron 0.50% by mass

USE

- Biostimulant used to improve growth and colouring of fruits. Provides phosphorous and potassium in an optimum ratio to strengthen flowering and fruit quality.
- It also brings selected essential amino acids for ethylene biosynthesis that also acts as precursors of polyamines such as spermidine and spermine. Known molecules related to stress and senescence alleviation as well as cellular growth.
- It is also useful to reduce proportion of small fruits at harvest.
