

## DECLARATION

- Free L-amino acids 12% by mass
- Standard aminogram: Aspartic acid, Glutamic acid, Histidine, Serine, Glycine, Threonine, Arginine, Alanine, Tyrosine, Valine, Methionine, Phenylalanine, Isoleucine, Leucine, Lysine, Proline, Tryptophan.

## USE

- Biostimulant of vegetal origin and enzymatic hydrolysis used as source of all L-free aminoacids involved in several physiological processes of plant metabolism, boosting general growth.
- Secondary use as coadjuvant to increase / improve absorption on plant tissues of compatible fertilizers and plant protection products.
- The exogenous applications of amino acids on plants allow to overcome abiotic stress conditions, adverse situations like vigour reductions caused by herbicide applications and a faster recovery of vegetative growth.
